

# Social Signal Processing for Android

- Realtime multimodal signal processing on virtually every Android device (phones, watches, glasses)
- Support for standard Android sensors (camera, microphone, IMU, ...)
- Support for external sensors via bluetooth (Myo, Empatica, MS Band, Angel)
- Machine learning-based classification (NaiveBayes, SVM)
- Networking functionality (WiFi, Bluetooth)
- **SSJ Creator:** Android App for building, editing and running SSJ pipelines without writing a single line of code
